Education

University of California, Davis — Davis, CA
B.S. Computer Science, Minor in Statistics | GPA: 3.59/4.0 — *Graduated Jun 2026*

Experience

Gen AI + Full Stack Intern — Aug 2026 – Present
Think Round — *San Francisco, CA (Remote)*

- Shipped **3** merged PRs into Think Round's production **Next.js/TypeScript** site, building a Communities section with a list/grid toggle for the Paradise Project page and extending the **Sanity CMS** schema with a new subtitle field
- Eliminated stale exhibit content on the Paradise Project page by adding ISR revalidation (revalidate = 30), so **Sanity** publishes appear within 30 seconds instead of waiting on a full redeploy
- Built macro-chatbot, which builds a recipe ingredient-by-ingredient and returns exact macros via a **RAG** pipeline over USDA FoodData Central, with recipe generation on **Claude** and automatic failover to a local **Ollama** model

Open Source Contributor — Aug 2026 – Oct 2026
Various Projects — *Remote*

- Fixed **4** freeCodeCamp workshops and labs (**JavaScript/TypeScript**) by replacing brittle regex test assertions with behavior- and AST-based checks, so arrow functions and alternate styles pass without weakening test rigor
- Eliminated a recurring webpack build warning and a duplicated **Docker** database setting in Open Energy Dashboard, by excluding a dependency's missing source map from source-map-loader and reusing the shared docker-compose variables
- Contributed to OpenRFM, an open-source customer-segmentation tool, adding an upload-requirements hint that surfaces required CSV columns before file selection to reduce failed uploads

Machine Learning Researcher — Oct 2025 – Dec 2025
PRISM ML Lab, UC Davis — *Davis, CA (Remote)*

- Designed **4** LLM evaluation tasks that **Gemini 2.5** failed, each with a **Python** verification script, computed ground truth, and error analysis, catching invented data rows and correct code paired with wrong reported output
- Wrote **7** test questions to evaluate a **RAG** marketing agent on Mistral-7B and Gemini 2.0 Flash, covering competitor analysis, market trends, and target audiences

Software Engineer Intern — Jun 2024 – Jul 2024
Monterey Peninsula College — *Monterey, CA*

- Built a data visualization tool in Component Pascal (BlackBox Framework) parsing arbitrary CSVs into a linked-list structure, dynamically rendering histograms
- Designed a binning algorithm for multi-histogram rendering, mentored by an industry mentor at Applied Solar Energy

Projects

AutoFit | Next.js, TypeScript, Flask, Python, scikit-learn, Claude API | Live Demo

- Built an end-to-end AutoML tool that turns a raw CSV upload into a fitted model, using **Claude** to pick the target variable, predictor columns, model type, and evaluation metrics so no ML expertise is required from the user
- Added a 1-5 data-quality score assessing completeness and authenticity, manual override of any AI decision with instant client-side re-fitting, and production safeguards (4MB upload limit, 50K row cap, rate limiting, zero data persistence)

Salon Menu | React, Vite, Tailwind CSS, JavaScript | Live Demo

- Reached **450+** unique visitors with a QR-code menu that replaced a salon's single shared swatch binder, where one customer browsing left everyone else waiting. Built the gallery as **30+** independently pinch-zoomable, pannable, and rotatable cards
- Resolved a scroll-vs-zoom gesture conflict by gating pan activation on zoom state, and built a swatch-color fallback for missing photos, keeping the static bundle backend-free and accessible (semantic buttons, reduced-motion support)

Salon Calendar | React, Vite, Tailwind CSS, Supabase, PostgreSQL | Live Demo

- Captured **125+** real appointments on one shared calendar that replaced a salon's stack of per-employee paper books, which gave no single view of the day and sat one coffee spill away from lost bookings. Syncs across every device instantly via **Supabase** Realtime
- Engineered a time parser across **36** asserted cases, letting staff type appointments as written on paper ("230 Full set", "2;30"), storing plain date and time columns so UTC conversion never shifts a booking a day

Rate My Stuff | MERN, Express, MongoDB, Mongoose, TypeScript | Live Demo

- Engineered a **RESTful API** in **Node.js/Express** with **full CRUD** for ratings, comments, and images, backed by **MongoDB**/Mongoose
- Built a responsive **React/TypeScript** frontend with **React Router**, deployed to Render with **GitHub** CI/CD

Technical Skills

Languages: JavaScript, TypeScript, Python, HTML/CSS
Frameworks & Libraries: React, React Router, Next.js, Node.js, Express, Tailwind CSS, Vite, Flask
Databases: PostgreSQL, Supabase, MongoDB
AI/ML & APIs: Claude API, RAG, Ollama, scikit-learn
Tools & Platforms: Git, GitHub, Docker, Vercel, Sanity CMS
