EDUCATION

University of California, Davis
Bachelor of Science in Computer Science

Davis, CA
Graduated Jun 2026

EXPERIENCE

Software Developer

Jun 2024 – Jul 2024

Monterey Peninsula College

Monterey, CA

- Built a data visualization tool in Component Pascal (BlackBox Framework) that parses arbitrary CSV files into a linked list structure and dynamically renders histograms, eliminating the need for format specific hardcoding
- Designed a binning algorithm to sort parsed data into histogram bins, rendering multiple overlaid and tabbed histograms under mentorship from an industry mentor at Applied Solar Energy

PROJECTS

Salon Menu | *React, Vite, Tailwind CSS, JavaScript, Framer Motion, Vercel*

2026

- Built a mobile-first digital nail polish menu displaying **25+ colors** across **4 categories**, using **React**, **Vite**, **Tailwind CSS**, and **JavaScript**, deployed as a static site on **Vercel**
- Designed a three-level navigation flow (categories, colors, zoom) with **Framer Motion** transitions and a solid-color swatch fallback for graceful rendering when photos are missing
- Implemented accessible UI patterns, including **semantic** button elements and text labels paired with every color swatch, for **keyboard and colorblind accessibility**

Rate My Stuff | *MERN, Express, MongoDB, Mongoose, TypeScript, Render*

Aug 2026

- Architected a full-stack **MERN** app with a RESTful **Express API** and **MongoDB/Mongoose** data layer, supporting full **CRUD** for user ratings, comments, and images
- Built a responsive **React/TypeScript** frontend with **React Router**, streamlining create/edit/comment/delete flows via reusable components
- Deployed to production on **Render** with GitHub-integrated **CI/CD** for zero-touch, continuous deployment

Outdone | *Python, Flask, Anthropic API, cron*

Aug 2026

- Built a full-stack personal automation tool integrating **Anthropic API**, **Gmail SMTP**, and **cron**, using a self-contained **JSON**-based data layer to eliminate manual intervention without a database
- Designed and shipped a **Flask** web UI for CRUD-style goal management, architecting a dedup algorithm with fallback logic to eliminate repetitive outputs while preventing edge-case blocking

Leetweak | *Python, Streamlit, GraphQL*

Aug 2026

- Built a full-stack local analytics tool in **Python** and **Streamlit**, integrating with LeetCode's public **GraphQL API** to rank topic proficiency and recommend targeted practice problems
- Streamlined a multi-step manual workflow (checking tag stats, filtering unsolved problems, judging difficulty) into a single interaction by architecting an automated **fetch-rank-filter** pipeline triggered on one form submission

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Component Pascal, HTML/CSS

Frontend: React, React Router, Tailwind CSS, Framer Motion, Vite, Streamlit

Backend: Node.js, Express, Flask, RESTful APIs, GraphQL

Databases: MongoDB, Mongoose

Tools & Platforms: Git, GitHub, Vercel, Render, CI/CD, cron, Anthropic API
